

Unity

The ultimate Solution!

Overview:

Unity is an AutoConfig(TM) expansion board for Amigas having Zorro slots. For first it's enables the possibility to add expansions initially done for A1200 to Zorro machines.

Additionally there is a connector for 10Mbit/s or 10/100 Mbit/s Ethernet network modules. Another nice feature is the integrated the high performance serial interface (people already enjoyed using it via Twister 1200).

Short specs:

- Zorro-2 AutoConfig(TM)
- up to 3.5 MB/s throughput from main CPU to board causing much lower load than older interfaces used at most Zorro boards
- two connectors for Melody 1200, Twister 1200 MK1 and so on which can be accessed up to 6 times that fast as in A1200
- 16 Bits wide connector intended for network option: Unity-Net 10 or 10/100 Mbit Ethernet
- high speed serial interface already known from Twister 1200 (reliable interface!)
- rich set of functionality by using only one Zorro slot
- if there are enough pre-orders a HQ parallel interface will be added for free
